SPECIFICATION

Tested Model	Renault Captur 1.0 TCe, LHD
Body Type	- 5 door hatchback
Year Of Publication	2019
Kerb Weight	1243kg
VIN From Which Rating Applies	- all Capturs
Class	Small Off-Road

General comments

* Owing to a shortage of semiconductors caused by the Covid pandemic, Captur vehicles in the "Zen" "Business" and "Intens" trim-lines did not have all the safety features required for the 2019 5-star rating. In particular, these vehicles were offered without radar, which is necessary to provide effective autonomous emergency braking (AEB). Captur vehicles with "RS Line" and "Initiale Paris" designations are not affected and the 5-star rating applies.

Comments

The passenger compartment of the Captur remained stable in the frontal offset test. Dummy readings indicated good protection of the knees and femurs of the driver and passenger. Renault showed that a similar level of protection would be provided to occupants of different sizes and to those sitting in different positions. Protection was rated as good for all critical body areas for the passenger. In the full-width rigid barrier test, protection was good or adequate for all critical body areas, both for the driver and the rear passenger. In the side barrier impact, protection of all critical body areas was good and the car scored full points in this test. Even in the more severe side pole test, protection of the chest was adequate and that of other body regions was good. Tests on the front seats and head restraints demonstrated good protection against whiplash injuries in the event of a rear-end collision. A geometric assessment of the rear seats also indicated good whiplash protection. The standard-fit autonomous emergency braking (AEB) system performed well in tests of its functionality at the low speeds at which many whiplash injuries occur, with collisions avoided in most test scenarios.

Comments

In the frontal offset test, protection was good or adequate for all critical parts of the body, for the 6 and 10-year dummies. The front passenger airbag can be disabled to allow a rearward-facing child restraint to be used in that seating position. Clear information is provided to the driver regarding the status of the airbag and the system was rewarded. The vehicle handbook says that the rear centre seat is not suitable for a universal child restraint, so the installation assessment was deemed a fail. Otherwise, all restraint types for which the Captur is designed could be properly installed and accommodated.

Operational From	7 km/h

Comments

The Captur has a seatbelt reminder system for the front and rear seats. The AEB system performed adequately in tests of its response to other vehicles at highway speeds. A lane support system helps prevent inadvertent drifting out of lane. A speed assistance system uses a camera mapping to identify the local limit and the driver can choose to allow the car to adjust the speed limiter accordingly.
